

OneTrust Data Redaction for Privacy Rights (DSAR) Management

AUTOMATE THE REDACTION OF EMAILS AND FILES IN RESPONSE TO PRIVACY RIGHTS REQUESTS

It seems that global privacy regulations have at least one thing in common: giving rights to the individual to make requests of their data. The GDPR, CCPA, LGPD, and other emerging regulations have shown that Privacy Rights Requests (or DSARs) aren't going anywhere, and organizations need to be ready to field an increasing number of requests with more complex requirements, especially with the inclusion of employee data. This makes it increasingly important for organizations to employ an efficient and secure process for managing these requests. Once the relevant data is identified for a request - a challenging task on its own - it is vital that personal and confidential data that isn't relevant to the requesting individual is redacted before it is shared. If this information isn't redacted appropriately it could result in a data breach and even bigger problems for your organization.

In addition to managing the entire privacy request fulfillment lifecycle through the OneTrust Privacy Rights (DSAR) solution, OneTrust also offers enhanced data redaction capabilities through our Data Redaction product. This product automatically scans emails and documents that are discovered as part of the fulfillment processes, leverages OneTrust Athena AI to identify data that needs to be redacted, and carries out the redaction process before securely sharing results with the requestor,

HOW DOES IT WORK?

DISCOVER DATA

Automatically discover or manually upload emails and files to the request

SCAN & REDACT

Scan files with Athena AI and NLP algorithms to automatically classify and redact necessary data

REVIEW RESULTS

Review redacted documents with confidence scores and make any necessary adjustments

SHARE WITH REQUESTOR

Securely share the results via an encrypted messaging portal to finish request fulfillment
